

Syropy AI Connectivity

2020h1AI Server Ranking

Overview

According to the report, in the first half of 2020, the global AI server market will reach US \$5. Artificial Intelligence (AI) server manufacturers have experienced surging demand as data center operators require significantly more computing power than before the advent of ChatGPT and other Generative Artificial Intelligence (Gen AI) tools. Here, we evaluate the components based on their AI processing power, measured in TOPS (Tera Operations Per Second) - a critical metric indicating the computational throughput, particularly for AI tasks. The first column shows peak performance for INT8/FP8 precision, which is the most widespread. Full reports and the complete data sets that underpin benchmarks, market forecasts and ecosystem reports are available as part of TBR's subscription service.
