

# **Can a network cabinet house broadband internet**

## Overview

---

It is not recommended to place your router inside a cabinet as it can lead to poor Wi-Fi signal strength and potential overheating issues. Fibre-to-the-cabinet (FTTC) broadband or VDSL is a type of internet connection that uses fibre-optic cables to carry data from the internet to a street cabinet near your home. A Network Cabinet, often interchangeably called a server rack, is a physical frame or enclosure designed to house and organize various types of network hardware and accessories. When setting up your home network, one of the first decisions you will have to make is where to put your modem or router. The only answer is to try both locations (and other locations if possible) to determine the resulting wireless performance.
