

Distribute the spacing between electrical boxes

Overview

The National Electrical Code (NEC) recommends a minimum clearance of 3 feet in front of panels and 30 inches in width. Dedicated space: The space equal to the width and depth of electrical equipment in addition to the space extending. Electrical panels, also known as breaker boxes or distribution boards, are critical components in our electrical systems. Is it required that panels have 30 inches between them when installed?

Or is this just a working space clearance.
