

Distribution Box PBD

From standard **1U** to **8U** sizes to
fully customized **Non-standard** enclosures.

Overview

Clamping blocks and power distribution blocks (PDB) for the DIN rail are suitable for collecting and distributing potentials within sub-distribution boxes and switchgear. Power Distribution Boxes allow the protection of the primary circuits (pre-heating, electric steering, body computer etc) and the distribution of the engine power. It means joining a world of diversity, in terms of professions, technologies, projects and cultures, and a working community with real expertise to. It simplifies wiring by consolidating connections, enhancing organization, safety, and maintenance.
