

**Does the telecom company
have fiber optic cables so I can
install a network cable**

Overview

Since installing fiber most often requires laying a new cable and setting up specialized equipment, fiber providers typically do not give the option for you to self-install fiber internet. Fiber optic internet is generally installed in the following 5 steps, which we'll dive deeper into throughout the article: A technician checks your area and prepares the connection from the neighborhood fiber network. A fiber cable (drop) is run from a nearby terminal that could be either a pole or DSL lines based on copper wires can only achieve download speeds of around 16 megabits per second. Unlike traditional cable internet, which relies on electrical signals, fiber optics transmits data using light signals through thin glass or plastic strands. There are different ways of installing fibre broadband, depending on what kind of property you live in or whether there's an Openreach modem already installed.
