

Equipped with a distribution box

Overview

A electrical distribution box acts as the central hub for managing electrical power, directing the main supply into subsidiary circuits equipped with protective devices like circuit breakers or fuses. By managing circuits individually, it prevents overloads and keeps your electrical setup running smoothly. The distribution box is an electrical equipment with the characteristics of small size, easy installation, special technical performance, fixed position, unique configuration function, no site restrictions, widespread application, stable and reliable operation, high space utilization rate, small.
