

# **Gigabit Ports on Fiber Optic Routers**

## Overview

---

SFP ports support multiple data rates and interfaces, including Gigabit Ethernet, 10 Gigabit Ethernet, Fibre Channel, SONET/SDH, and more. They can also help different transmission distances, ranging from a few meters to several kilometers. However, you need a router capable of supporting multi-gig speeds to get fiber internet connectivity. A fiber-optic connection is the best choice for fast home internet as it has a number of advantages compared to traditional copper cables, such as faster speeds and less interference. For budget-conscious households, the TP-Link Archer AX55 delivers reliable Wi-Fi 6 performance without the premium price tag. Correct me if i'm wrong, but 1Gb/s+ bandwidth comes to you (from the ISP) via a fiber optic cable. Which either needs a fiber optic port, or an SFP port, plus a fiber optic-to-sfp transceiver.
