

How long is the relay protection return time

Overview

Its defining feature is zero intentional time delay (or minimal delay), with typical operating times of 20–50 ms, complying with IEC 60255-151 (Overcurrent Protection Standards) and IEEE C37. In electrical engineering, a protective relay is a relay device designed to trip a circuit breaker when a fault is detected. Time-graded protection is implemented using overcurrent relays with either definite time characteristic or inverse time characteristic.
