

How long should the fiber optic cable be reserved in the duct

Overview

The general idea is that a fiber cable can fill no more than 60~70 percent of the area of an innerduct. Fiber optic cable carries enormous amounts of data, but the glass or plastic fiber at its core is unforgiving of mechanical stress, moisture infiltration, and improper installation practices. Fiber optic cable should not be coiled in a continuous direction except for lengths of 100 ft (30 m) or less. The charter of the FOA was to promote professionalism in fiber optics through education, certification, and.
