

How much does a six-meter stainless steel cable tray weigh

Overview

This tool estimates tray self-weight from material density and an approximate metal volume. For solid and perforated trays, it treats the tray as a formed sheet: Developed sheet width per meter: $Dev = W + 2H + 2R$ Metal volume per meter: $V = Dev \times t \times 1 \times (1 - \dots$. Find the volume of the cable tray: This depends on the dimensions (width, height, thickness) and length of the tray.
