

# **How to connect an explosion-proof plug to a distribution box**

## Overview

---

Connection: Explosion-proof distribution box and galvanized pipe should be connected with threaded connection and use explosion-proof junction box and explosion-proof switch. The steel pipe needs to have sufficient strength and protection, and its wall thickness is. Even if the circuit did ignite a quantity of hazardous mixture, the wiring container, can "contain" the resulting explosion and cool any escaping hot gasses so that they would be incapable of igniting the hazardous mixture outside of the. Open the terminal chamber cover, connect the cables through the cable gland to the terminals, ensuring both the internal and external ground wires are correctly connected. Explosionproof enclosures are used as classified enclosures, pull boxes, or control panels in rigid conduit systems and with metal clad cable rated for hazardous locations.
