

How to ground the copper busbar of the distribution box

Overview

Connect the neutral bus bar to the metal enclosure using a grounding conductor. This ensures that any fault current will safely travel through the ground system, preventing potential hazards. The metal sheath and steel armor of the cables within the box should be connected to the grounding bolts on the box casing using copper conductors equivalent to the cross-sectional area of the metal sheath. They may be used in a variety of configurations ranging from vertical risers, carrying current to each floor of a multi-storey building, to bars used entirely within a.
