

# **Inspection Procedure for Relay Protection Testers**

## Overview

---

Typical relay testing involves: Visual Inspection: Look for physical damage, corrosion, or loose connections. Insulation Resistance Test: Check insulation integrity to prevent leakage and short circuits. The testing and verification of relay protection devices can be divided into four groups: Type tests are needed to prove that a protection relay meets the claimed specification and follows all relevant standards. Most protective systems are fed from a current transformers on the supply cable or bus bars Inject PRIMARY current injection testing checks all current parts of the protection system by injecting the IP here test current through the primary circuit, of CT protective CTs.
