

Iron wire for laying optical cables

Overview

This document describes further details of messenger strand, lashing wire, and the planning and installation process. Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. The basic structure of an optical cable is generally composed of a cable core, a reinforced steel wire, a filler, and a sheath. It is imperative that certain procedures be followed in the handling of these cables to avoid damage and/or limiting their usefulness.
