

# **Is a fiber optic adapter considered a device**

## Overview

---

A fiber optic coupler is a device used in systems with one or more input fibers and one or several output fibers. If all involved fibers are single-mode (supporting only a single mode per polarization direction). A fiber-optic adapter connects two optical fiber connectors in the fiber optic lines.

### Fiber-optic adapter

A fiber optic coupler is a device used in optical fiber systems with one or more input fibers and one or several output fibers. Light entering an input fiber can appear at one or more outputs and its spectral power distribution potentially depending on the wavelength and polarization. Such couplers can be fabricated in different ways, for example by thermally fusing fibers so that their cores get into intimate contact. If all involved fibers are single-mode (supporting only a single mode per polarization direction
