## Overview

---

Fiber optic cables (also known as optical fiber cable) are network cables that contain many strands of fine glass fibers known as optical fibers, which are kept well-insulated within the body of the cable. To connect two or more computers or networking devices in a network, network cables are used. Unlike copper wires, which are limited by lower data transmission speeds, shorter transmission distances, and higher susceptibility to electromagnetic interference, fiber optic cables offer unparalleled performance and can. Transmission Efficiency: These cables are superior to traditional copper cables as they can transmit data over longer distances.
