

Long-term optical cable

Overview

With proper installation, fibre optic cables have a service life of around 25 years, but in practice, can perform for far longer. A process called 'stress corrosion' is the biggest threat to the longevity of fibre cabling. Effective lifecycle management of fiber optic cables, from selection and installation to daily maintenance and replacement, is essential. Optical cables are the backbone of modern communication networks, delivering high-speed data across vast distances. Wireless, DOCSIS, and DSL technologies have required continuous outdoor infrastructure upgrades to increase speeds and capacity, and carriers have recognized the value of fiber as these.
