

Low-voltage cable trays in the computer room

Overview

A cable management system for ceilings and raised access floors is designed to elevate from ceiling tiles or floor slab, horizontally distribute, and manage low voltage cables. All illustrations, descriptions and technical information included in this document are provided as indications and can cable trays are equivalent. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned. Selecting the correct cable tray for low voltage system—such as data networking, telecommunications, security, and building automation—is a critical decision that impacts system performance, scalability, and long-term reliability. ABB designs and manufactures cable tray systems, including perforated tray, cable ladder, channel tray and strut (metal framing), directly from production facilities in Canada and Saudi Arabia. Even wireless networks are wired; it's only the "last mile" that offers cable-free connectivity.
