

OI Digital Wiring Unit ddf

Overview

The DDF is a connecting panel for terminating 2Mb/s, 8Mb/s, 34Mb/s, DS-3(45Mb/s), 140 Mb/s and 155Mb/s Tx and Rx electrical signals. Such termination panel provides flexible points between line-side and equipment-side for various digital circuits. DDF (Digital Distribution Frame) unit is an important part in the field of electric power communication. It is suitable for the transmission rate is 2 Mb/s ~ 155 Mb/s digital terminal equipment or SPC digital signal wiring and switching circuit, switching and scheduling, with test function. LongXing is expert in producing DDF products and currently providing products to China's main. The utility model discloses a DDF frame wiring installation device of an optical transmission system, which comprises a frame, wherein the inner space of the frame is divided into equal small spaces by a division plate, the upper part of the division plate is connected with a communication screen.
