

# PoE power supply issues for switches

## Overview

---

If your Cisco switch PoE is not working, the most common causes are an exhausted PoE power budget, a disabled inline power configuration, physical cable faults, incompatible powered devices (PD), or a crashed PoE controller. When a problem occurs with PoE, in most cases, the error symptom can be simply shown as the PoE switch not providing power, and the powered devices will stop. Cisco recommends that you have knowledge of these topics:

- Catalyst 9000 Series switches
- Power over Ethernet

This document is not restricted to specific software and hardware. Power over Ethernet (PoE) technology plays a vital role in modern network infrastructure by simplifying device deployment — delivering both power and data over a single Ethernet cable.
