

Quantum-safe wavelength division multiplexing equipment

Overview

They are LambdaNet-based broadcast WDM networks, quantum routers based on a waveguide grating router, and fiber-to-the-quantum nodes that are fed by two opposing and extreme quantum light signals, namely the co-herent (Glauber) and number (Fock) states. This article examines the quantum version of three conventional wavelength-division-multiplexing and multiple-access (WDM) communication systems and networks. Close collaboration with our customers and our proven expertise across fiber, cable, and connectivity ensure you'll get solutions that are smarter, denser, faster, and easier. ("KDDI Research"), and Toshiba Digital Solutions Corporation ("Toshiba Digital Solutions") have developed a multiplexing technology for quantum key distribution (QKD) (Note 1) that is theoretically impossible to eavesdrop.
