

# **Sewage Discharge Distribution Box**

## Overview

---

A distribution box (d-box) is a small concrete or plastic box installed between a septic tank and drain field that divides outgoing effluent equally among multiple leach lines. Without it, wastewater would flood one section of the drain field while starving others, causing premature failure. The D box is a junction point where the effluent is divided and directed to different parts of the drain field. This comprehensive guide will explain what they are, how they work, why proper distribution is important, signs of a failing D-box, and steps for inspection, maintenance, and repair.
