

Solution 100G Access Switch

Overview

The 100G Ethernet Switch is a high-performance network device engineered to provide throughput of up to 100 gigabits per second (Gbps). Acting as a central switch within a network, it interconnects multiple devices, enabling swift and efficient data exchange. FS 100 Gigabit data centre switches with build-in Broadcom switch chip provides powerful hardware switching capacity and data centre features (supporting stacking, MLAG, PFC, ECN, VxLAN, EVPN, REUP, etc), making them ideal for cloud data centre and high-end campus network. QFX5100 top-of-rack 10GbE/40GbE switches for the data center offer low latency, deployment versatility, and rich automation features. As data centers transition to 100G and higher-speed Ethernet, power consumption is no longer driven by servers alone.
