

The calculation rules for the quantity of pigtails are as follows

Overview

Pigtails are short lengths of conductors used to connect receptacles to branch-circuit wiring. When determining the correct outlet box size, pigtails do not need to be counted because they do not contribute to the overall conductor fill within the box. The wires are counted by size and type for example 14 awg wire is 2 cubic inches for each hot, neutral and only counted once for the ground, if you have a pig tail that doesn't add to the count, if you have 12 awg wire it is 2. These calculations include determining the total wattage, voltage drop, and circuit load, among others.
