

**The radius of curvature of the pigtail should not be less than**

## Overview

---

The normal recommendation for fiber optic cable is the minimum bend radius under tension during pulling is 20 times the diameter of the cable ( $d$ ). How thick is the material you are trying to use this tool on?

The error message is telling you that any radius on the tool. Note: The common term for the curvature of the cable is "bend radius" but sometimes "bend diameter" may be more useful.
