

Vietnam AI Server 100G

Overview

On May 9, 2024, FPT imported Vietnam's first DGX H100 server system, marking the initiation of a strategic collaboration with NVIDIA to advance artificial intelligence (AI) development in the country. A Vietnamese retailer builds AI servers with RTX 5090s to leverage higher memory capacity for AI workloads. The GeForce RTX 5090 was launched at the end of January, and it has been over two months, and yet we don't have sufficient stocks of the GPU. The V100 GPU server (NVIDIA Tesla V100) is a powerful solution for Artificial Intelligence (AI), Deep Learning, and High-Performance Computing (HPC), suitable for systems requiring high computing performance and large-scale data processing. Once clustered together, they create large memory pools that can support various AI workloads, something that will always find a customer, and wealthy customers those are. Vietnam's digital economy has been expanding at one of the fastest rates in Southeast Asia, driven by strong internet penetration, rising e-commerce adoption, and a rapidly growing startup ecosystem. A Vietnamese PC known as Nguyencongpc, recently posted a picture of a custom rig with multiple units of the NVIDIA GeForce RTX 5090. While it may look like the rig would be deployed for cryptomining, it was actually built to facilitate a more.

Vietnam AI Server 100G

Vietnamese Retailer Builds AI Servers With Several

A Vietnamese retailer builds AI servers with RTX 5090s to leverage higher memory capacity for AI workloads. Builds machines using various
